0.2mm Marble Effect Adhesive Film**

Product Description

Stylish Marble PVC Film for Kitchen Counter Top Decoration 0.10mm-0.5mm Thickness

Product Description:

Our PVC foil is primarily made from Polyvinyl Chloride (PVC), an acclaimed synthetic plastic material that is known for its durability, flexibility, and ease of processing.

It is also available in a wide range of colors, patterns, and textures, and can mimic the look of natural materials, such as wood, stone, fabric, or metal, for a cost-effective alternative that retains a high-quality aesthetic.

Its versatility in application can be credited to its adhesive properties; it works well in high-traffic locations, and sticks to different surfaces such as doors, cabinets, furniture, and walls.

Our product is famous for its robustness, and requires minimal upkeep. Just a weekly wipe-down with a moist cloth is needed.

Besides being durable, our PVC foil is incredibly cost-effective, allowing users to enjoy a lavish atmosphere without expending too much. Moreover, customization and modifications are possible, as manufacturers provide a wide range of styles and finishes to accommodate various user specifications and personal preferences.

Finally, PVC decorative foil is widely used in residential settings, for purposes like kitchen and bathroom cabinets, interior doors, wall paneling, furniture surfaces, and retail displays.

Technical Parameters:

Our products come in various thicknesses, with 0.1mm being the minimum and 0.5mm the maximum.

The widths come in two sizes: 1260mm and 1400mm.

The length of the rolls differ, ranging from 100m to 400m per roll.

Clients can find a multitude of designs to choose from, including wood grain, solid colors, marbles, bricks, and more. Additionally, the surface treatment can vary, with matt, super matt, embossed, high gloss, and soft touch all being available.

Finally, OEM and ODM services are also offered to serve customer's needs.

Applications:

Different Process for Different Applications

Membrane Press (Vacuum Press)

This process is used to cover MDF, particleboard, wooden boards, fiberboard, and more with thickness ranging from 0.20mm to 0.50mm. The end product width range can be from 1260mm to 1400mm and the length range from 100m to 300m in a roll. Commonly used for doors, kitchen cabinets, wardrobes, and furniture.

This process can be used to cover embossed boards and cover all five surfaces at the same time.

Wrapping Profiles

With thickness ranging from 0.12mm to 0.18mm, there is flexibility in the width size, ranging from 40mm to 1260mm, with a length of 300m to 800m in a roll. Applicable for wrapping all sorts of profiles, including wood, aluminum, PVC and more for door frames, window sills, base channels, PVC ceilings and such.

Cold Laminating

The thickness for this process can be from 0.12mm to 0.20mm, with a width of 1240mm to 1260mm, and a length of 300m to 500m in a roll. It is applicable for flat panels, including wood, steel, aluminum, PVC, and other materials, for doors and furniture.

Hot Laminating

It has a thickness from 0.16mm to 0.30mm, a width of 1260mm, and a roll length of 200m to 300m. It is suitable for the lamination covering for PVC panels, steel panels, aluminum panels for doors, skirting, and so on.

Self-adhesive

With a thickness of 0.10mm to 0.20mm, the width is fixed to 600mm or 1220mm, and length of a roll is from 5m to 50m. This process can be used for sticking any smooth surface for furniture and indoor decorations.
